The purpose of this document is to provide the information needed to populate values in the Student Test Update (STU) data file and instructions for exporting and importing the file into PearsonAccess^{next}. The first section of this document has a checklist of tasks to complete before exporting and importing the file, *Matching Criteria* used to match STU records to student records currently in PearsonAccess^{next}, step-by-step instructions for importing the file into PearsonAccess^{next}, and *Helpful Hints*. The second section of this document contains a table with the list of fields present in the data file. This table indicates if the field is required, field length requirements, *Field Definitions*, *Notes/Validations*, and expected values or criteria for entering valid values. It also contains CMAS content area-specific information for particular fields.

The STU file is used to update student test information, including not tested and void test score coding, **after** testing. Users should export the STU file, make updates, and then re-import. Populating the STU file from scratch is not recommended.

Checklist Prior to File Import		
1	Receive a PearsonAccess ^{next} User Account. The Student Test Update Add-on Role is needed in order to export and import the STU file.	<input type="checkbox"/>
2	After making any updates, verify student demographic fields used for matching criteria are the same between the exported and updated STU data file and what is currently populated in PearsonAccess ^{next} .	<input type="checkbox"/>
3	Verify that all required fields are populated.	<input type="checkbox"/>
4	All expected values match the values found in this document. Bolded text in the Expected Values column must be entered exactly as it appears.	<input type="checkbox"/>
5	Do not delete the header row.	<input type="checkbox"/>
6	Import the file as a Comma Delimited File (.csv file extension) or Fixed File (.txt file extension).	<input type="checkbox"/>

Key:

- Blue rows identify fields used for matching individual test records.
- Green cells identify fields that can be updated by users with the Student Test Update role.

Important

Read the file layout Field Definitions and Notes carefully to prevent records from encountering cross validation errors.

The *Updateable Column* indicates if the field can be updated via the STU file import. Some fields are not updateable in the STU file because these fields are validated against the form the student was assigned for testing. These fields cannot be changed post testing.

Make sure to export the STU file, apply updates, and then re-import the file. If data is present in PearsonAccess^{next} and the data field is updateable on the STU file, any values changes (including blank values) on the import file, will overwrite the data in PearsonAccess^{next}.

If the field is listed as not updateable, any changes to the field values will be ignored during a file import.

Helpful Hints:

- If using Microsoft Excel and a .csv file, it is recommended that the source file is saved as an Excel spreadsheet to keep formatting. Prior to each import attempt, save the data file as an Excel spreadsheet. Then save again as a .csv file. If an error is encountered, make the updates in the source Excel spreadsheet, and save, and then save again as a .csv file. Repeat as necessary.
- It is recommended to always work from a recently exported STU file.
- A file may contain records with or without errors. Records without errors are imported into PearsonAccess^{next}. Records with errors need to be corrected and re-imported into PearsonAccess^{next}. If errors are discovered, the initial import file may be reused by leaving the records without errors in the file and correcting only the records with errors. When re-importing this file, PearsonAccess^{next} treats the records without errors as updates, even if no values changed. This will not cause any issues.

Student Matching Rules

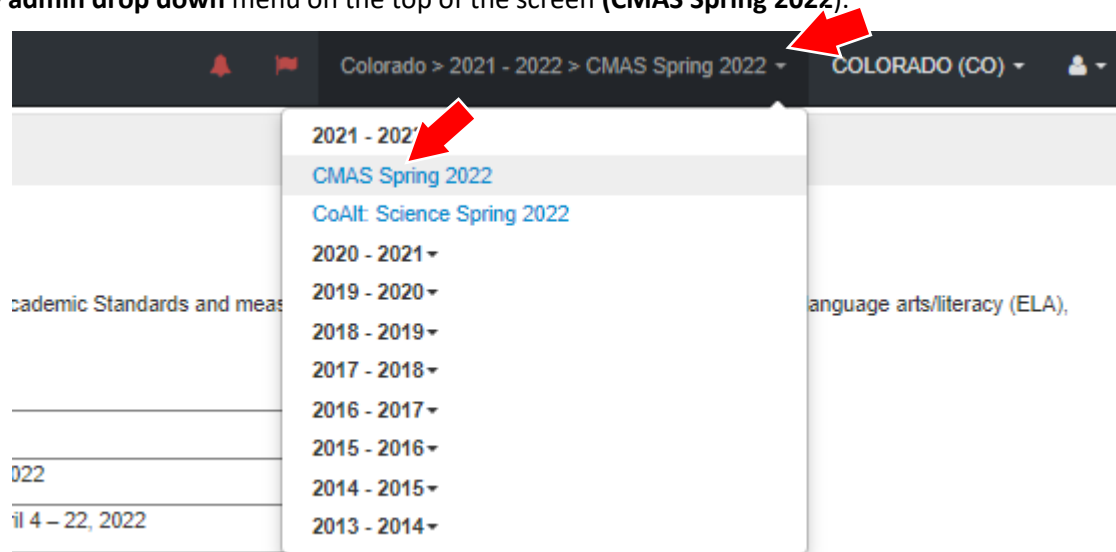

When student data is imported into PearsonAccess^{next}, demographic fields are used to identify unique students. When data is updated in PearsonAccess^{next}, matching rules are applied to these fields to identify if records currently exist within the system. The table below provides information on the fields used for matching and whether they are updateable through the STU Import.

Core Demographic Fields	Match Hierarchy Level	How Matching Works	Can this field be updated via File Import?	Definitions and Notes
Pearson ID	1	Record will match if Pearson ID and at least two of the following Core Demographic Fields Match: <ul style="list-style-type: none"> State Student Identifier Local Student Identifier Last or Surname First Name Sex Birthdate 	No. The Pearson ID is generated by PearsonAccess ^{next} and cannot be modified by end users.	Unique Pearson ID that will move intra state if a student moves district to district or school to school. Assigned within PearsonAccess ^{next} .
State Student Identifier	2	If Pearson ID is blank; Record will match if State Student Identifier and at least two of the following Core Demographic Fields Match: <ul style="list-style-type: none"> Local Student Identifier Last or Surname First Name Sex Birthdate 	No. The State Student Identifier cannot be updated by importing a Student Test Update file. However, it can be updated through the PearsonAccess ^{next} user interface.	A unique number or alphanumeric code assigned to a student by a state or any other entity.
Local Student Identifier		This is a Core Demographic field used for matching in Hierarchy 1 and 2 Levels. *Note this is not a required field	Yes. The Local Student Identifier value can be updated if the Pearson ID and/or State Student Identifier and at least two of the following Core Demographic Fields match: <ul style="list-style-type: none"> Last or Surname First Name Sex Birthdate 	A unique number or alphanumeric code assigned to a student by a school system or any other entity.
Last or Surname		This is a Core Demographic field used for matching in Hierarchy 1 and 2 Levels. (Note, only the first 10 characters are used to match on the Last or Surname Field)	Yes. The Last or Surname value can be updated if the Pearson ID and/or State Student Identifier and at least two of the following Core Demographic Fields match: <ul style="list-style-type: none"> Local Student Identifier First Name Sex Birthdate 	The full legal last name borne in common by members of a family.

Core Demographic Fields	Match Hierarchy Level	How Matching Works	Can this field be updated via File Import?	Definitions and Notes
First Name		<p>This is a Core Demographic field used for matching in Hierarchy 1 and 2 Levels.</p> <p>(Note, only the first 8 characters are used to match on the First Name Field)</p>	<p>Yes. The First Name value can be updated if the Pearson ID and/or State Student Identifier and at least two of the following Core Demographic Fields match:</p> <ul style="list-style-type: none"> • Local Student Identifier • Last or Surname • Sex • Birthdate 	<p>The full legal first name given to a person at birth, baptism, or through legal change.</p>
Sex		<p>This is a Core Demographic field used for matching in Hierarchy 1 and 2 Levels.</p>	<p>Yes. The Sex value can be updated if the Pearson ID and/or State Student Identifier and at least two of the following Core Demographic Fields match:</p> <ul style="list-style-type: none"> • Local Student Identifier • Last or Surname • First Name • Birthdate 	<p>The concept describing the biological traits that distinguish the males and females of a species.</p>
Birthdate		<p>This is a Core Demographic field used for matching in Hierarchy 1 and 2 Levels.</p>	<p>Yes. The Birthdate value can be updated if the Pearson ID and/or State Student Identifier and at least two of the following Core Demographic Fields match:</p> <ul style="list-style-type: none"> • Local Student Identifier • Last or Surname • First Name • Sex 	<p>The year, month, and day on which a person was born.</p>

Export a Student Test Update File

1. Log into PearsonAccess^{next}.
2. Select the **admin** from the **admin drop down** menu on the top of the screen (**CMAS Spring 2022**).

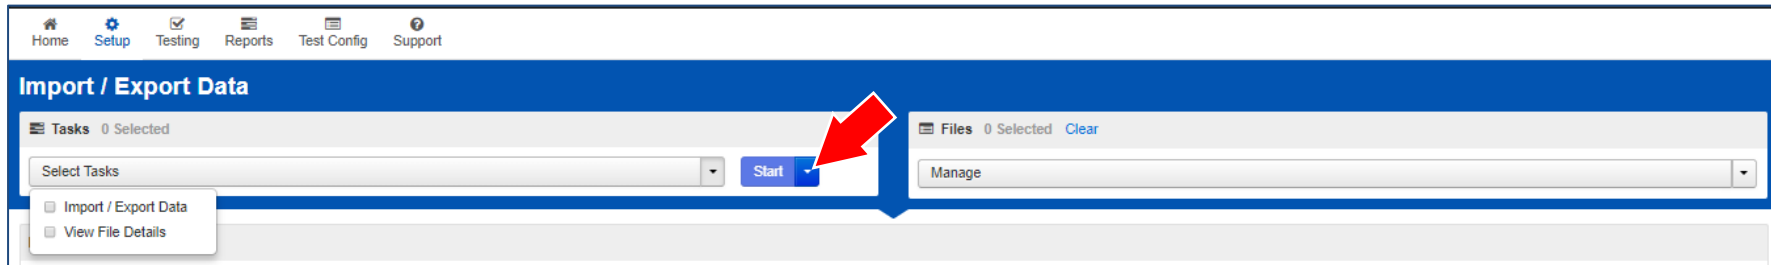

3. In the **SETUP** section, click on the **Select an action** dropdown menu, and then select **Import/Export Data**.

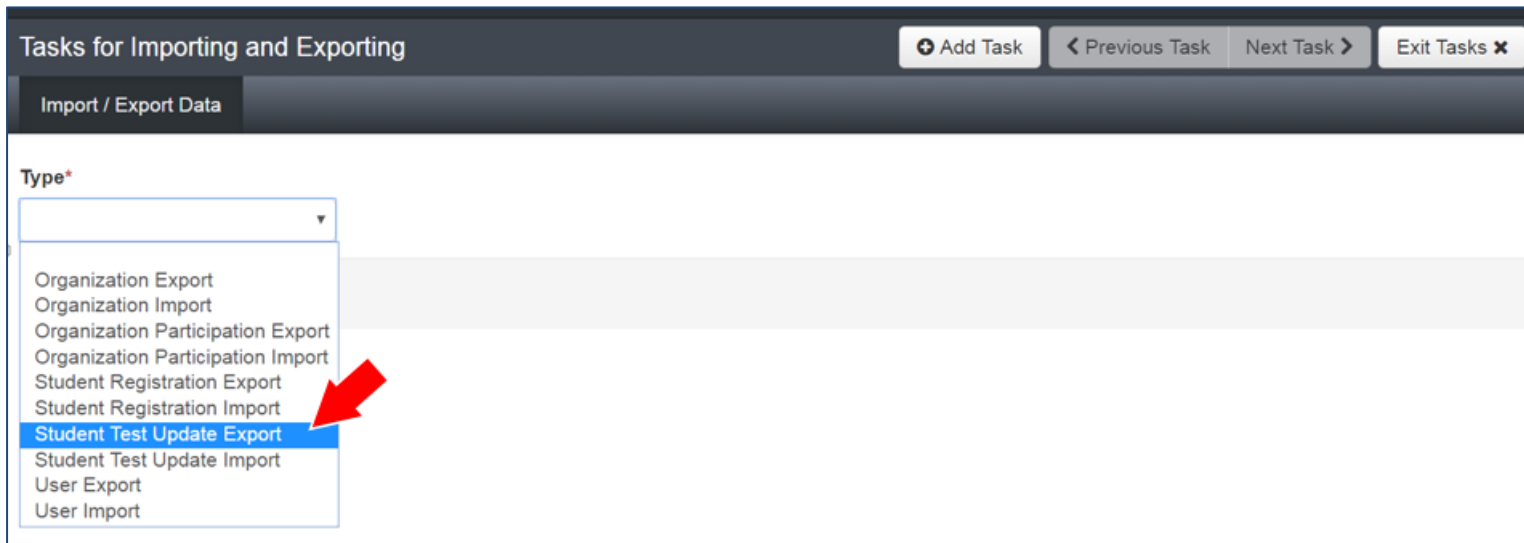

4. In the **Select Tasks** dropdown menu, select **Import/Export Data**.

5. Select **Start**.

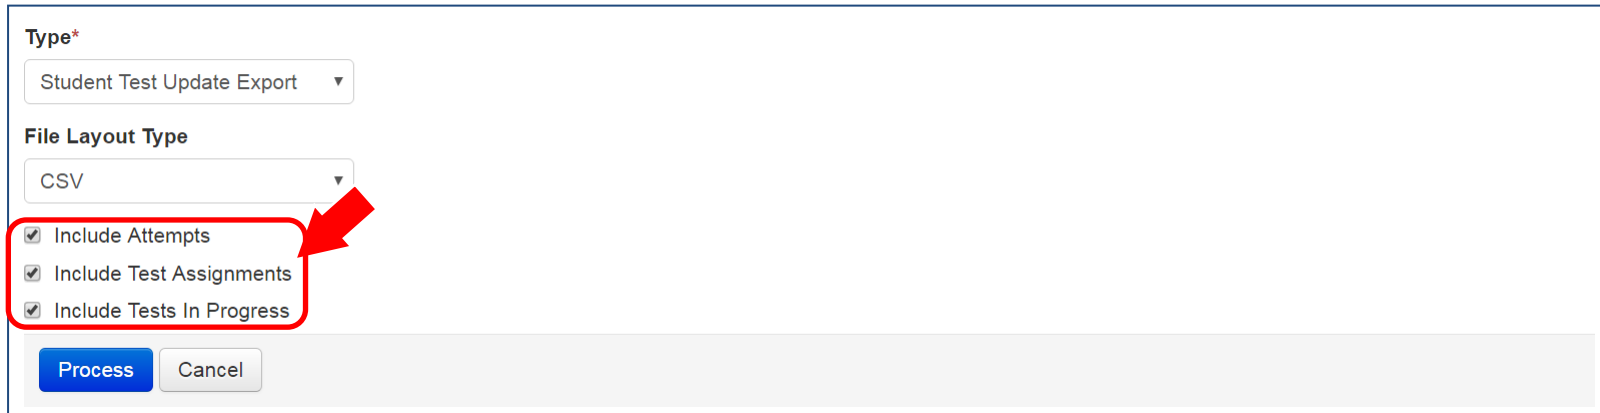

6. In the **Type** dropdown menu, select **Student Test Update Export**.

7. In the **File Layout Type** dropdown menu, select the type of file to be exported (.csv or Fixed).

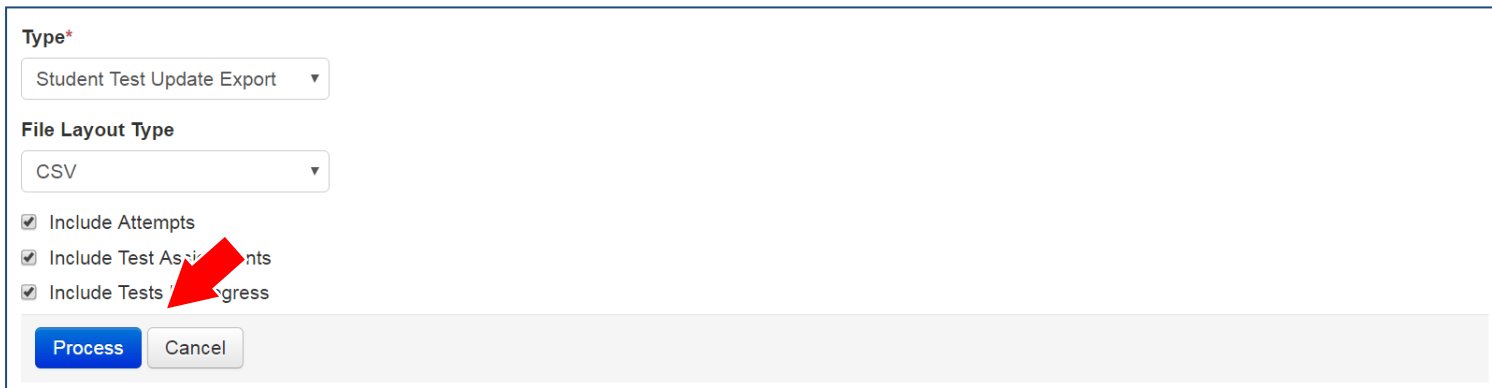

8. Select all the filter values.

The screenshot shows a web form titled "Type*" with a dropdown menu set to "Student Test Update Export". Below this is a "File Layout Type" dropdown menu set to "CSV". Underneath are three checked checkboxes: "Include Attempts", "Include Test Assignments", and "Include Tests In Progress". These three checkboxes are enclosed in a red rectangular box, and a red arrow points from the right side of the box towards the "Include Attempts" checkbox. At the bottom of the form are two buttons: "Process" (in blue) and "Cancel" (in grey).

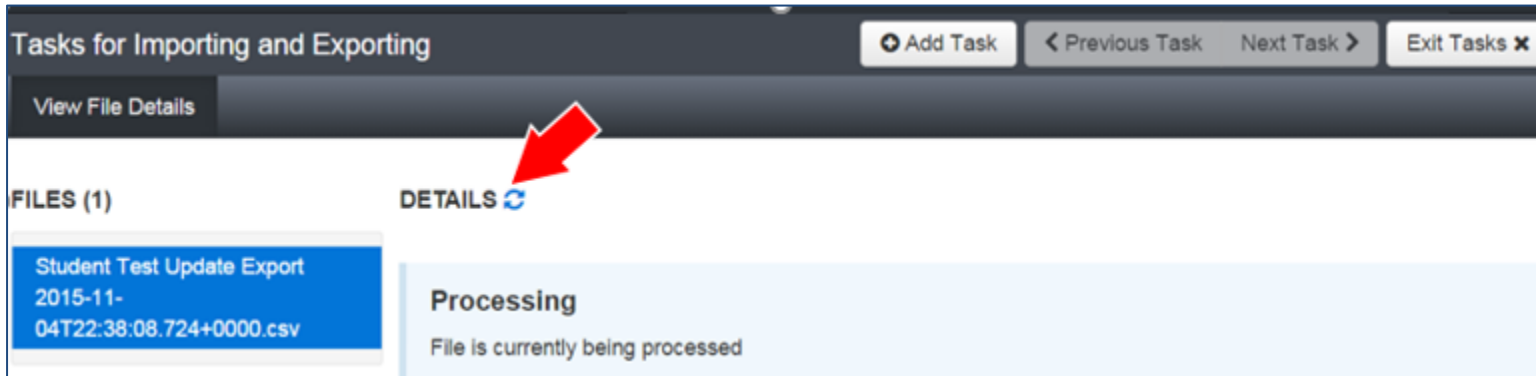

9. Click **Process** to submit the selected file.

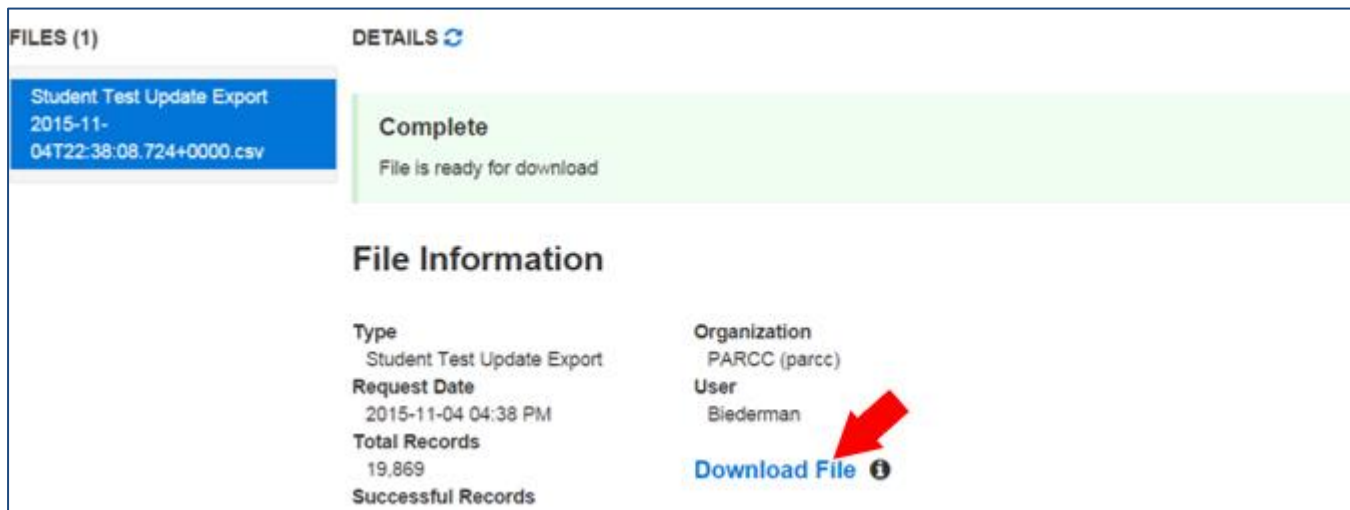

This screenshot is identical to the one above, showing the same form with the "Process" button highlighted by a red arrow pointing to it from the right.

Checking the status of an exported file

The **View File Details** screen appears after selecting **Process**. This screen displays the processing status. Select the  icon to refresh the screen.

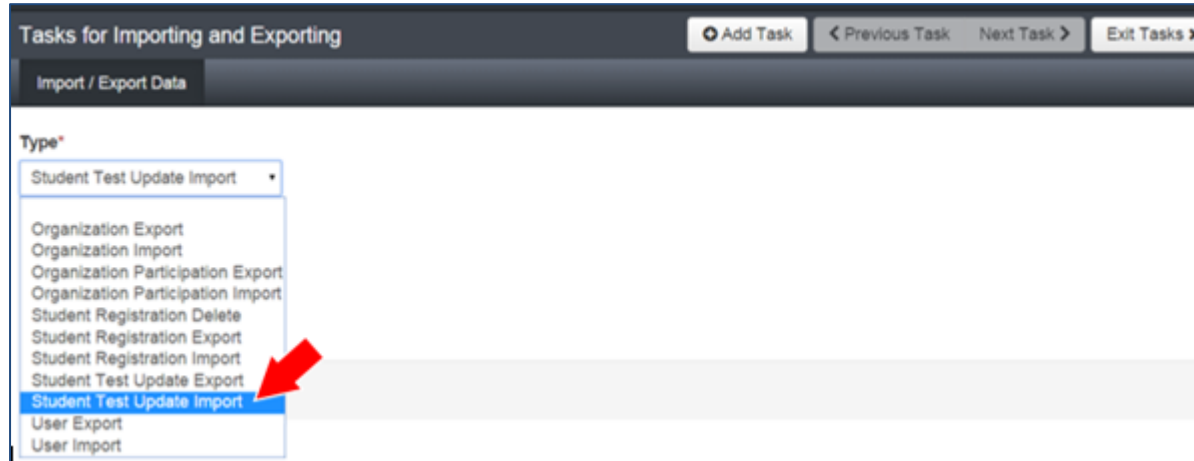

After the file processes, the **View File Details** screen displays a **Complete** message, and the number of **Successful Records** is indicated. The number of **Error Records** is also indicated.

Import a Student Test Update File

1. On the **Import/Export Task** screen, select **Student Test Update Import**.

Helpful Hint:

A file may contain records with or without errors. The records without errors are imported into PearsonAccess^{next}. Correct records with errors and re-import into PearsonAccess^{next}. The initial import file may be reused by leaving the records without errors in the file and correcting only the records with errors. When re-importing this file, PearsonAccess^{next} treats the records without errors as updates, even if no values changed. This does not cause any issues.

Student Data – Fields A – AU are consistent across all CMAS content areas. Starting with Column AV, some Field Notes, Validations, and Expected Values are broken out to identify appropriate information for each content area.

Column Letter	Field Name	Required Y/N	Field Length	Field Definitions	Field Notes & Validations	Expected Values	Update-able?
Core Student Data							
A	State Abbreviation	Y	2	State's 2-character abbreviation		CO = Colorado	N
B	Testing District Code	Y	4	The Testing District responsible for administering the test for a student.	Error and reject record if organization does not exist and set to participate in administration within PA ^{next} .	A-Z 0-9 Identifier Length = 4	N
C	Testing School Code	Y	4	The Testing School responsible for administering the test for a student.			N
D	Responsible District Code	N	4	The district responsible for specific educational services and/or instruction of the student (District or a Non-school/Private reporting directly to the state).			A-Z 0-9 Blank Identifier Length = 4
