## ITEM INFORMATION

#### Colorado Academic Standard (CAS) Evidence Outcome

Describes the evidence that demonstrates that a student is meeting the grade level expectation at a mastery level.

#### **Disciplinary Core Ideas**

The Disciplinary Core Ideas (DCIs) form the basis for the content that students are expected to know by the end of the grade level and are present in every item.

#### Science and Engineering Practices

The Science and Engineering Practices (SEPs) in the CAS are interwoven within certain items, and all SEPs are assessed according to the <u>SEP progressions</u>. The SEP is the first few words of the Evidence Outcome. If an SEP is not present in an item, then the item will not ask the student to demonstrate knowledge of the first part of the Evidence Outcome.

#### **Crosscutting Concepts**

Crosscutting concepts (CCCs) have applications across all domains of science. As such, they are a way of linking the different domains of science. The CCCs in the CAS are interwoven within certain items. Each CCC found in the CAS is assessed according to the <u>CCC progressions</u>.

#### Scenarios for Items

Items are driven by high-quality scenarios that are grounded in phenomena or problems. All scenarios are puzzling and intriguing and are explainable using grade appropriate integration of the three dimensions of the 2020 CAS. Scenarios are presented in three ways: simulations, clusters, and standalone items.

#### Simulations

Students are presented with an interactive simulation of a science model or experiment and asked to make sense of the observed phenomenon. They answer multiple two- or three-dimensional questions related to the content using their knowledge of the 2020 CAS.

#### Clusters

Students are presented with background information, still images, graphs, tables, and additional media and asked to make sense of the described phenomenon. Using their knowledge of the 2020 CAS, they answer multiple two- or three-dimensional questions related to the content.

#### Standalone Items

Students are presented with a unique phenomenon and asked to make sense of that phenomenon based on the information in the stimulus. They answer the two- or three-dimensional question using their knowledge of the 2020 CAS.

Simulation and cluster scenarios comprise the majority of the assessment as students are asked to make sense of a larger phenomenon and answer questions associated with those scenarios. Standalone items are included only to target a small number of 2020 CAS Evidence Outcomes not represented in simulation and cluster scenarios. These Evidence Outcomes rotate on an annual basis.

# **ITEM TYPES**

Items are questions that appear on the assessments. They are presented in three different ways.

#### Selected Response (Multiple Choice, Multiple Response, and Fill in the Blank)

For multiple choice and multiple response items, students select a correct answer out of provided choices. For fill in the blank items, students type/write their answer in a blank box.

#### Technology-Enhanced (Bar Graph, Drag and Drop, Inline Choice, Hot Spot, and Match Table Grid)

Students show their answer using technology, such as by creating a bar graph using a template provided by the online testing system or on the paper-based test. Drag and drop items require students to drag answer choices into correct answer bays (draw lines or write corresponding letters for paper-based testing). Inline choice items require students to select their answer from a drop-down menu (circle answer from a list of choices for paper-based testing) to complete a sentence or sentences. Hot spot items require students to select the correct response from its location in an image (write corresponding letters or circle answer for paper-based testing). Match table grid items require students to check checkboxes in cells to indicate a match between the column and row labels.

#### **Constructed Response**

Students construct an open-ended response.

### STUDENT PERFORMANCE

#### P Value – Selected Response and Technology-Enhanced Only

The P value represents the percentage of students who answered each selected response and technology-enhanced question correctly. For example, if the P value associated with a question is 0.64, then 64% of students responded to the question with the correct answer.

#### Score Point Distribution – Constructed Response Only

The score point distribution provides the percentage of students who scored at each possible score point for constructed response questions.

#### Sample Student Responses and Annotations – Constructed Response Only

Sample student responses are provided at each score point for constructed response items. Sample responses include annotations that provide reasoning for the score. Scoring rubrics are provided for constructed response items.

**Note**: P values and score point distributions are only available for released items (i.e., questions that previously appeared on CMAS assessments administered statewide). Items without this information were developed as sample items.

# ANSWER KEY: ITEM SET 1

#### Item Set 1 – Question 1 (TEI Multiple Select)

A student investigates matter by using two identical plastic bottles. The student seals one bottle with a balloon and the other bottle with a cap. The student squeezes each bottle with the same amount of force, as shown in the diagram.

Which two statements correctly explain the student's results?

- A. The bottle with the balloon is easy to squeeze because tiny particles of matter that make up the air inside the bottle can move into the balloon.
- B. The bottle with the cap is difficult to squeeze because the cap causes tiny particles of matter in the sides of the bottle to harden.
- C. The cap holds in tiny particles of matter that take up space and fill the bottle, making it difficult to squeeze the bottle.
- D. The balloon applies force to the tiny particles of matter inside the bottle, so less force is needed to squeeze the bottle.
- E. The balloon allows space for tiny particles of matter to move as they become larger, so the bottle is easy to squeeze.

| Evidence Outcome                    | SC.5.1.4.a                     | Use models to describe that energy in animals' food (used for body<br>repair, growth and motion and to maintain body warmth) was once<br>energy from the sun. (5-PS3-1) (Clarification Statement: Examples<br>of models could include diagrams and flowcharts.)  SEP 2 DUM CCC<br>5 EM |
| Disciplinary Core Idea              | SC.5.1.4                       | The energy released from food was once energy from the sun.  |
| Science and Engineering<br>Practice | Developing and<br>Using Models | Develop and/or use models to describe and/or predict phenomena.  |
| Crosscutting Concept                | Energy and Mat                 | ter  |
| P Value                             | 0.721                          |  |

#### Item Set 1 – Question 3 (Selected Response)

In the state of Colorado, there was an increase in recycled paper on the last day of the school year. A student wonders how the increase in recycled paper changed the total waste produced per person for that day. Which sentence **best** explains a property of matter that would explain the change observed?

- A. The total mass of matter cannot be calculated because the mass of the recyclables has changed.
- B. The total mass of matter does not change because the mass of the trash did not change.
- C. The total mass of matter decreased because the mass of the trash increased.
- D. The total mass increased because the mass of the recyclables increased.

| Item Information                    |                             |   |
|-------------------------------------|-----------------------------|---|
| Answer                              | D                           |   |
| Standard                            | Physical Science            |   |
| Evidence Outcome                    | SC.5.1.2.a                  | Measure and graph quantities to provide evidence that regardless of<br>the type of change that occurs when heating, cooling or mixing<br>substances, the total weight of matter is conserved. (5-PS1-2)<br>(Clarification Statement: Examples of reactions or changes could<br>include phase changes, dissolving and mixing that form new<br>substances. Does not include distinguishing mass and weight.)<br>(Boundary Statement: Mass and weight are not distinguished at this<br>grade level.)  SEP 5 UMCT CCC 3 SPQ |
| Disciplinary Core Idea              | SC.5.1.2                    | Chemical Reactions that occur when substances are mixed can be identified by the emergence of substances with different properties; the total mass remains the same.  |
| Science and Engineering<br>Practice | Using<br>Mathematics<br>and | Describe, measure, estimate, and/or graph quantities such as area, volume, weight, and time to address scientific and engineering questions and problems.   |
|                                     | Computational<br>Thinking   |   |
| Crosscutting Concept                | Scale, Proportic            | on, and Quantity  |

#### Item Set 1 – Question 4 (Selected Response)

A student wants to identify the step when the recycled plastic changes to fabric during the recycling process.
During which step shown in Figure 3 and Figure 4 is a new substance formed?
A. weaving the thread into cloth to make clothing
B. melting the plastic to make thread
C. mixing the plastic with chemicals
D. grinding the plastic into flakes

| Item Information        |                  |  |
|-------------------------|------------------|--|
| Answer                  | С                |  |
| Standard                | Physical Science |  |
| Evidence Outcome        | SC.5.1.2.b       | Conduct an investigation to determine whether the mixing of two or<br>more substances results in new substances. (5-PS1-4) SEP 3<br>PCOI CCC 2 CAE                   |
| Disciplinary Core Idea  | SC.5.1.2         | Chemical Reactions that occur when substances are mixed can be identified by the emergence of substances with different properties; the total mass remains the same. |

| Crosscutting Concept    | Cause and Effec  | t  |

#### Item Set 1 – Question 5 (TEI Inline Choice)

While observing the sorting process in Part 2, the students found that 8 cans were sorted into the bin and 33 items were not.

Consider how the property of a material helps sort metal cans.

Select one correct response from each drop-down menu to complete the sentence.

The students found that 8 v of the recyclables had magnetic

properties because magnets attract

| Item Information        |                  |  |
|-------------------------|------------------|--|
| Answer                  | See Image        |  |
| Standard                | Physical Science | 2  |
| Evidence Outcome        | SC.5.1.1.b       | Make observations and measurements to identify materials based<br>on their properties. (5-PS1-3) (Clarification Statement: Examples of<br>materials to be identified could include baking soda and other<br>powders, metals, minerals and liquids. Examples of properties could<br>include color, hardness, reflectivity, electrical conductivity, thermal<br>conductivity, response to magnetic forces and solubility; density is<br>not intended as an identifiable property. Does not include density or<br>distinguishing mass and weight.) (Boundary Statement: At this grade<br>level, mass and weight are not distinguished, and no attempt is<br>made to define the unseen particles or explain the atomic-scale<br>mechanism of evaporation and condensation.)  SEP 3 PCOI CCC 3<br>SPQ |
| Disciplinary Core Idea  | SC.5.1.1         | Matter exists as particles that are too small to be seen;<br>measurements of a variety of observable properties can be used to<br>identify particular materials.   |
| Science and Engineering | Planning and     | Make observations and/or measurements to produce data to serve   |
| Practice                | Carrying Out     | as the basis for evidence for an explanation of a phenomenon or  |
|                         | Investigations   | test a design solution.  |
| Crosscutting Concept    | Scale, Proportio | on, and Quantity   |
| P Value                 | 0.743            |  |

magnetic metals.

#### *Item Set 1 – Question 6 (TEI Inline Choice)*

| While studying the recycling process shown in Part 3, a student wonders whether a new material was formed at the end of each process in Figure 3 and Figure 4. |
|--|
| Select one correct response from each drop-down menu to complete the sentences.  |
| The plastic flakes formed at the end of Figure 3 are not 🗸 a new material  |
| because their properties are the same as v the recyclable plastic. The   |
| fabric formed at the end of Figure 4 is a new  |
| its properties are different from v the plastic flakes.  |

| Item Information                    |                     |  |
|-------------------------------------|---------------------|--|

|        | Scoring Rubric   |  |  |
|--------|--|--|--|
| Points | Attributes   |  |  |
| 2      | <ul> <li>The student's answer should include: <ul> <li>identification of the force that causes the items to fall to the lower belt</li> <li>a reason that supports the identification of the force</li> </ul> </li> <li>Student responses may include but are not limited to: <ul> <li>The force that causes the items to fall to the lower belt is the force of gravity. The force of gravity is the force exerted by Earth to pull items down. Since the items are moving downward, the items are being pulled by the gravitational force of Earth.</li> </ul></li></ul> |  |  |
| 1      | Student response demonstrates a partial understanding of the task.   |  |  |
| 0      | Student response does not demonstrate an understanding of the task.  |  |  |

|            | Sample Student Responses   |
|------------|--|
| Sample stu | dent responses are not representative of all correct answers for an item and are provided only as a guide to assist teachers with scoring.   |
| Points     |  |
|            | Sample Response  |
|            | Sample A   |
|            | I believe what force moves objects from the higher belt to the lower belt is gravity. I think this because as  |
|            | the belt rotates the worker tosses the paper items while the other recyclables fall due to gravity and collect   |
|            | on the other belt.   |
|            | Sample B   |
|            | Gravity. The thing falls.  |
| 2          | Sample Annotation  |
| 2          | Sample A   |
|            | <ul> <li>The response gives a correct identification of the force that causes the items to collect on the lower<br/>belt (force moves objects from the higher belt to the lower belt is gravity).</li> </ul> |
|            | • The response provides a reason that supports the identification of the force (other recyclables fall   |
|            | due to gravity).   |
|            | Sample B   |
|            | • The response gives a correct identification of the force that causes the items to collect on the lower   |
|            | belt (gravity).  |
|            | • The response provides a reason that supports the identification of the force (the thing falls).  |
|            | Sample Response  |
|            | Sample A   |
|            | The force is gravity and I know that because the arrows are pointing down.   |
|            | Sample B   |
|            | Gravity.   |
|            | Sample Annotation  |
|            | Sample A   |
| 1          | <ul> <li>The response gives a correct identification of the force that causes the items to collect on the lower<br/>belt (the force is gravity).</li> </ul>  |
|            | <ul> <li>No credit is awarded for element 2. The response does not provide a reason that supports the</li> </ul>   |
|            | identification of the force (because the arrows are pointing down) does not show how gravity   |
|            | moved the objects.   |
|            | Sample B   |
|            | • The response gives a correct identification of the force that causes the items to collect on the lower   |
|            | belt (gravity).  |
|            | No credit is awarded for element 2. The reason is not addressed.   |

|   | Sample Response   |  |  |  |
|---|---|--|--|--|
|   | Sample A  |  |  |  |
|   | The items on the top belt collect to the lower belt because of magnets and gravity. Gravity is when things go<br>up, they must come down. Magnets can help as well because some things that can be recycled are<br>magnetic.  |  |  |  |
|   | Sample B  |  |  |  |
|   | Magnets are used to get metals on the lower belt because you need to separate metals from paper   |  |  |  |
|   | Sample Appotation   |  |  |  |
| 0 | Sample A  |  |  |  |
|   | <ul> <li>No credit is awarded for element 1: The response gives both an incorrect and a correct<br/>identification for the force that causes the items to collect on the lower belt (collect to the lower<br/>belt because of magnets and gravity).</li> </ul>                    |  |  |  |
|   | <ul> <li>No credit is awarded for element 2. The response provides incorrect reasons for both the forces<br/>identified. The reason given for gravity (Gravity is when things go up, they must come down) does<br/>not explain that gravity is the force pulling down.</li> </ul> |  |  |  |
|   | Sample B  |  |  |  |
|   | • No credit is awarded for element 1: The response gives an incorrect identification for the force that causes the items to collect on the lower belt (Magnets are used to get metals on the lower belt).   |  |  |  |
|   | No credit is awarded for element 2. The reason is not addressed.  |  |  |  |

#### Item Set 1 – Question 8 (TEI Match Table Grid)

A student studies the simulation and makes a list of observations of what the epiphyte uses for growth. Use the simulation to identify whether each observation is correct or incorrect.

Select one choice for each row of the table.

| Observation  | Correct | Incorrect |
|--|---------|-----------|
| Water used by the epiphyte comes from the atmosphere.  |         |           |
| Nutrients used by the epiphyte are dissolved in water. |         |           |
| Water used by the epiphyte comes from the tree.        |         |           |
| Water used by the epiphyte comes from the soil.        |         |           |

|                         |                  | Item Information  |
|-------------------------|------------------|---|

#### *Item Set 1 – Question 10 (Selected Response)*

A student claims that epiphytes can only grow in very dusty environments.
Why is the student's claim incorrect?
A. A dusty environment lacks nutrients.
B. A dusty environment lacks sunlight.
C. A dusty environment lacks fresh air.
D. A dusty environment lacks rain.

Most epiphytes live in tropical rain forests. Tropical rain forests experience more clouds, fog, and rain than other habitats. Using the model in Part 1 of the simulation, explain why tropical rain forests are the most suitable location for epiphytes. Your response should include an explanation of:

- · why most epiphytes live in tropical rain forests
- how the weather in tropical rain forests affects the growth of epiphytes

|   | <ul> <li>No credit is awarded for Element 2, this response does not describe how the weather in tropical<br/>rainforests affects the growth of epiphytes.</li> </ul> |  |  |  |  |

A student claims epiphytes can grow without soil because epiphytes get everything they need from sunlight. Explain why the student's claim is incorrect. Your response should:

- explain why sunlight alone is not enough for an epiphyte to grow
- describe evidence from the simulation that supports your answer

Г

|   | Sample Response   |  |  |  |
|---|---|--|--|--|
|   | Sample A  |  |  |  |
|   | Sunlight should be enough. I don't think this question is right. Because in the picture it shows the nutrients  |  |  |  |
|   | drowning in the water so sunlight will evaporate them and that will work.   |  |  |  |
|   | Sample B  |  |  |  |
|   | Soil is what plants need not the sun, but they both start with s so that should be what the plants need. They need nutrients and that's what's in the pictures.                             |  |  |  |
|   | Sample Annotation   |  |  |  |
| 0 | Sample A  |  |  |  |
|   | <ul> <li>No credit is awarded for element 1, this does not explain why sunlight alone is not enough for an<br/>epiphyte to grow.</li> </ul>   |  |  |  |
|   | • No credit is awarded for element 2, this response does not describe sufficient evidence from the simulation that supports the student's answer.   |  |  |  |
|   | Sample B  |  |  |  |
|   | <ul> <li>No credit is awarded for element 1, this does not explain why sunlight alone is not enough for an<br/>epiphyte to grow.</li> </ul>   |  |  |  |
|   | <ul> <li>No credit is awarded for element 2, this response does not describe sufficient evidence from the<br/>simulation that supports the student's answer, see note in rubric.</li> </ul> |  |  |  |

A student plans to create a model showing one example of how Earth's atmosphere interacts with the geosphere.

Which model would best demonstrate this interaction?

- O A. a clay mountain with cotton balls at the top representing clouds
- B. a fan gently blowing across a tray containing soil and rocks
- O C. water being poured over a pile of sand
- O D. plastic ducks floating in a tray of water

| Item Information                    |                                |  |

# ANSWER KEY: ITEM SET 2

#### Item Set 2 – Question 1 (Selected Response)

A student places two seeds on a wet sponge. The student adds water to the sponge each day. After three days, the student observes a root growing out of one seed.

Which claim does this evidence support?

- $\odot~$  A. Plants can grow if they have fertilizer and air.
- B. Plants can grow if they have air and water.
- C. Plants need soil and fertilizer to grow.
- O D. Plants need soil and water to grow.

| Item Information                    |  |  |

|----------------|--|--|--|--|
| Points         | Attributes   |  |  |  |
|                | The student's answer should include:   |  |  |  |
|                | <ul> <li>What the student should put in the first box to complete the model.</li> </ul>  |  |  |  |
|                | <ul> <li>An explanation of how energy is transferred from the source in the first box to the rabbit.</li> </ul>  |  |  |  |
| 2              | <ul> <li>Student responses may include but are not limited to:</li> <li>The box should be filled with the Sun to complete the model.</li> <li>The Sun produces light, which the grass uses to make food. Then the stored energy in the grass is transferred to the rabbit when the rabbit eats the grass.</li> </ul> |  |  |  |
| 1              | Student response demonstrates a partial understanding of the task.   |  |  |  |
| 0              | Student response does not demonstrate an understanding of the task.  |  |  |  |

| Sample student regenerees are not representative of all correct answers for an item and are provided and an available and the second statement of all correct answers for an item and are provided and are provide |  |  |  |  |
|--|--|--|--|--|
| Points   | auent responses are not representative of an correct answers for an item and are provided only as a guide to assist teachers with scoring.   |  |  |  |
| 1 01113  | Sample Response  |  |  |  |
| 2  | Sample A         Sample A         The sun should be in the box because sunlight gives energy to the plant. The rabbit gets energy by eating the plant. And then a fox will eat the rabbit and the energy will go to the fox.   |  |  |  |
|  | <ul> <li>Sample B The sun shines on the grass and the grass makes the energy into food. The rabbit eats the grass for energy so it can grow and survive. </li> <li>Sample Annotation Sample A <ul> <li>The response states what the student should put in the first box to complete the model (<i>The sun</i>). </li> <li>The response provides an explanation of how energy is transferred from the source in the first box to the rabbit (<i>The rabbit gets energy by eating the plant</i>). The extraneous information given (<i>fox will eat the rabbit and the energy will go to the fox</i>) is correct and does not affect the score for the response. </li> <li>Sample B <ul> <li>The response states what the student should put in the first box to complete the model (<i>The sun shines on the grass</i>). It is acceptable that the student did not state that the sun should be in the box. It is clear that the sun is the source of energy.</li> <li>The response provides an explanation of how energy is transferred from the source in the first box </li> </ul> </li> </ul></li></ul> |  |  |  |
|  | to the rabbit (The rabbit eats the grass for energy so it can grow and survive).   |  |  |  |
|  | Sample Response  |  |  |  |
|  | <ul> <li>Sample A The student should put sun in the first block because the grass gets its energy from the sun. </li> <li>Sample B The energy for the plant is the dirt because a lot of plants can't live without it and after the rabbit eats the plants it absorbs the nutrients of the plant making it strong. Sample Annotation</li></ul>   |  |  |  |
|  | Sample A   |  |  |  |
| 1  | <ul> <li>The response states what the student should put in the first box to complete the model (grass gets its energy from the sun).</li> <li>The response does not address how energy is transferred from the source in the first box to the rabbit.</li> </ul>  |  |  |  |
|  | <ul> <li>Sample B</li> <li>The response provides an explanation of how energy is transferred from the source in the first box to the rabbit (<i>the rabbit eats the plants it absorbs the nutrients of the plant</i>). Energy is not specifically mentioned in this response, but "absorbs the nutrients" is considered sufficient.</li> <li>The response incorrectly states that the soil is the source of energy.</li> </ul>   |  |  |  |

|   | Sample Response   |
|---|---|
|   | Sample A  |
|   | The student should put water in the empty box because rabbits and all animals need water to survive. To   |
|   | transfer the source of energy into the rabbit is by the rabbit drinking it.   |
|   | Sample B  |
|   | The energy comes from the plants. The plants make their own food meaning they grow by themselves all the fiber and stuff they need. The animals need all of that to be healthy and hydrated so that's where they get their energy from and why. |
|   | Sample Annotation   |
| 0 | Sample A  |
|   | • The response incorrectly states that the student should put " <i>water</i> " in the first box to complete the model. While living things need water, it is not the source of energy.  |
|   | • The response does not provide an explanation of how energy is transferred from the source in the first box to the rabbit.   |
|   | Sample B  |
|   | • The response does not state what the student should put in the first box to complete the model. It incorrectly states that plants make their own energy.  |
|   | • The response does not provide an explanation of how energy is transferred from the source in the first box to the rabbit.   |

#### Item Set 2 – Question 3 (TEI Inline Choice)

| Based on the information provided, complete this explanation about the                     |
|--|
| Select one correct response from each drop-down menu to complete the                       |
| sentences.   |
| The source of the two rivers is a glacier or ice cap $\checkmark$ . This type of source is |
| the biggest → source of fresh water → on Earth.  |

| Item Information        |                                 |   |  |  |
|-------------------------|---------------------------------|---|--|--|
| Answer                  | See Image                       |   |  |  |
| Standard                | Earth and Space Science         |   |  |  |
| Evidence Outcome        | SC.5.3.4.a                      | Describe and graph the amounts and percentages of saltwater and<br>freshwater in various reservoirs to provide evidence about the<br>distribution of water on Earth. (5-ESS2-2) (Boundary Statement:<br>Limited to oceans, lakes, rivers, glaciers, ground water, and polar ice<br>caps, and does not include the atmosphere.)  SEP 5 UMCT CCC 3<br>SPQ |  |  |
| Disciplinary Core Idea  | SC.5.3.4                        | Most of Earth's water is in the ocean and much of Earth's freshwater in glaciers or underground.  |  |  |
| Science and Engineering | SEP Not                         | N/A   |  |  |

#### *Item Set 2 – Question 7 (Constructed Response)*

A student wonders what force causes the water in the rivers to flow. Based on Figure 1, explain the force that helps the water travel from the source of the rivers toward the ocean. Your response should include:

- identification of the force that causes water to flow from the source of the rivers toward the ocean
- an explanation, based on Figure 1, of why this force affects the direction that the rivers take from their source to the ocean

## Item Set 2 – Question 9 (Selected Response)

A student claims that a new substance forms during the investigations. Based on the investigation, which observation **best** provides evidence that a new substance forms during the investigations?

- A. The final mass of each mixture is the same as the total mass of the original substances.
- B. The colored soap turns colorless because it was stirred in the water.
- C. The balloon inflates because baking soda reacts with vinegar.

D. The penny becomes cleaner in each mixture.

#### Item Set 2 – Question 10 (TEI Inline Choice)

A student wonders why the final mass of the baking soda and vinegar mixture changed in the table in Part 2.

Select one correct response from each drop-down menu to complete the sentences.

The mass in Part 2 seems to decrease by 5 v g. But the

student can use the results in Part 3 as evidence that mass

stays the same  $\checkmark$  when baking soda is added to vinegar.

| Item Information                    |  |   |

|                          | Gas is released when they are mixed together, meaning that a chemical reaction is happening.   |  |  |
|                          | Sample Annotation  |  |  |
|                          | Sample A   |  |  |
| 2                        | <ul> <li>The response includes a description of the evidence from Part 3 that supports the student's claim</li> </ul>                      |  |  |
| Z                        | (The balloon inflates because they are reacting and making a new substance. So gas is released).   |  |  |
|                          | • The response gives an explanation of how this evidence supports the student's claim ( <i>Gas is not</i>                                  |  |  |
|                          | released in the other two because they are just mixing together, not making anything new).   |  |  |
|                          |  |  |  |
|                          | Sample B   |  |  |
|                          | The response includes a description of the evidence from Part 3 that supports the student's claim  |  |  |
|                          | (Gas is released when they are mixed together). In this context, "they" is taken to mean vinegar and                                       |  |  |
|                          | baking soda, since those are the ingredients mentioned in the prompt. The response does not state  |  |  |
|                          | that the balloon inflates, but "gas is released" is sufficient.  |  |  |
|                          | • The response gives an explanation of how this evidence supports the student's claim ( <i>a chemical</i>                                  |  |  |
| reaction is happening).  |  |  |  |
|                          | Sample Response  |  |  |
|                          | Sample A<br>When you mix vineger and baking code, it releases gas and inflates the balloon   |  |  |
|                          | when you mix vinegar and baking soda., it releases gas and inflates the balloon.   |  |  |
|                          | Sample B   |  |  |
|                          | If a new substance didn't form, then the mass of the mixture would be the same as the mass of the baking                                   |  |  |
|                          | soda and the mass of the vinegar.  |  |  |
|                          | Sample Annotation  |  |  |
|                          | Sample A   |  |  |
| 1                        | <ul> <li>The response includes a description of the evidence from Part 3 that supports the student's claim (<i>it</i></li> </ul>           |  |  |
|                          | releases gas and inflates the balloon).  |  |  |
|                          | • The response does not give an explanation of how this evidence supports the student's claim.   |  |  |
|                          |  |  |  |
|                          | Sample B   |  |  |
|                          | • The response gives an explanation of how this evidence supports the student's claim ( <i>If a new</i>                                    |  |  |
|                          | substance didn't form, then the mass of the mixture would be the same as the mass of the baking  |  |  |
|                          | soda and the mass of the vinegar).   |  |  |
|                          | • The response does not include a description of the evidence from Part 3 that supports the student's                                      |  |  |
|                          | claim. The prompt states that the change in mass is evidence of the formation of a new substance,  |  |  |
|                          | so this does not receive credit.   |  |  |

Г

|   | Sample Response   |  |  |  |  |
|---|---|--|--|--|--|
|   | Sample A  |  |  |  |  |
|   | I do not believe that the balloon is evidence that a new substance didn't form in the other experiments.  |  |  |  |  |
|   | There could be other evidence.  |  |  |  |  |
|   | Sample B  |  |  |  |  |
|   | They put helium in the third bottle and that made the balloon float.  |  |  |  |  |
| 0 | Sample Annotation   |  |  |  |  |
| • | Sample A  |  |  |  |  |
|   | • The response does not include a description of the evidence from Part 3 that supports the student's claim, or how this evidence supports the student's claim. |  |  |  |  |
|   | Sample B  |  |  |  |  |
|   | • The response does not include a description of the evidence from Part 3 that supports the student's   |  |  |  |  |
|   | claim, or how this evidence supports the student's claim.   |  |  |  |  |

#### *Item Set 2 – Question 13 (Constructed Response)*

A student has a sample of 10 g of cooking oil that looks similar to the soap in Part 2. Properties of cooking oil and soap are shown in the table.

#### Properties of Cooking Oil and Soap

| Material       | Observation When Stirred in<br>Water | Color in<br>Water |
|----------------|--------------------------------------|-------------------|
| cooking<br>oil | forms drops that float               | light tan         |
| soap           | disappears                           | light tan         |

Explain how a property of cooking oil would allow filter paper to separate the oil from water. Your response should include:

- identification of the property that causes the difference observed when the materials are stirred in water
- an explanation of why filter paper can only use this property to separate oil and water, not soap and water

| Item Information        |   |  |  |

| Scoring Rubric |  |  |  |
|----------------|--|--|--|
| Points         | Attributes   |  |  |
| 2              | <ul> <li>The student's response should include: <ul> <li>Identification of the property that causes the difference observed when the materials are stirred in water.</li> <li>An explanation of why filter paper can only use this property to separate oil and water, not soap and water.</li> </ul> </li> <li>Student responses may include but are not limited to: <ul> <li>The property is solubility in water. The cooking oil will not pass through the filter paper because it does not dissolve in water, while the soap does dissolve in water and will pass through the filter paper.</li> </ul> </li> </ul> |  |  |
|                | large to pass through the filter paper.  |  |  |
| 1              | Student response demonstrates a partial understanding of the task.   |  |  |
| 0              | Student response does not demonstrate an understanding of the task.  |  |  |

| Sample Student Responses |  |  |  |  |  |
|--------------------------|--|--|--|--|--|
| Sample stu               | dent responses are not representative of all correct answers for an item and are provided only as a guide to assist teachers with scoring.   |  |  |  |  |
| Points                   |  |  |  |  |  |
|                          | Sample Kesponse  |  |  |  |  |
|                          | Sample A   |  |  |  |  |
|                          | The difference is observed because the soap dissolves in water and the oil stays separate. If you put the  |  |  |  |  |
|                          | soapy water through filter paper the soap will stay dissolved and stay with the water, but the oil is separate   |  |  |  |  |
|                          | so it will stick to the filter paper.  |  |  |  |  |
|                          | Sample B   |  |  |  |  |
|                          | The property is solubility. The soap goes through the filter paper with the water, but the oil is too thick and  |  |  |  |  |
|                          | it can't get through.  |  |  |  |  |
|                          | Sample Annotation  |  |  |  |  |
|                          | Sample A   |  |  |  |  |
| 2                        | <ul> <li>The response identifies the property that causes the difference observed when the materials are<br/>stirred in water (soap dissolves in water and the oil stays separate).</li> </ul>   |  |  |  |  |
|                          | • The response explains why filter paper can only use this property to separate oil and water, not   |  |  |  |  |
|                          | soap and water (the soap will stay dissolved and stay with the water, but the oil is separate so it will stick to the filter paper).   |  |  |  |  |
|                          | Sample B   |  |  |  |  |
|                          | <ul> <li>The response identifies the property that causes the difference observed when the materials are<br/>stirred in water (<i>The property is solubility</i>).</li> </ul>  |  |  |  |  |
|                          | • The response explains why filter paper can only use this property to separate oil and water, not soap and water ( <i>The soap goes through the filter paper with the water, but the oil is too thick and it can't get through</i> ). |  |  |  |  |

|   | Sample Response  |
|---|--|
|   | Sample A   |
|   | The soap dissolves in water and the oil doesn't. You could use filter paper to filter out the soap and the oil   |
|   | and then you would have clean water.   |
|   | Sample B   |
|   | The oil won't go through the filter paper because it's thicker than water.   |
|   | Sample Annotation  |
|   | Sample A   |
| 1 | <ul> <li>The response identifies the property that causes the difference observed when the materials are<br/>stirred in water (The soap dissolves in water and the oil doesn't).</li> </ul>                              |
|   | <ul> <li>The response incorrectly states that the soap could be filtered out using the filter paper and does<br/>not explain how solubility affects this process.</li> </ul>   |
|   | Sample B   |
|   | <ul> <li>The response explains why filter paper can only use this property to separate oil and water, not</li> <li>soan and water (The oil won't go through the filter paper because it's thicker than water)</li> </ul> |
|   | • The response does not identify the property that causes the difference observed when the   |
|   | materials are stirred in water.  |
|   | Samala Pasaansa  |
|   | Sample Response  |
|   | The property is temperature. To filter out the soap and water you just need to heat them up.   |
|   | Sample B   |
|   | You could mix the soapy water with the oily water and that would make the oil separate.  |
|   | Sample Annotation  |
|   | Sample A   |
| 0 | <ul> <li>The response does not identify the property that causes the difference observed when the<br/>materials are stirred in water.</li> </ul>   |
| • | <ul> <li>The response does not explain why filter paper can only use this property to separate oil and water</li> </ul>  |
|   | not soap and water.  |
|   | Sample B   |
|   | <ul> <li>The response does not identify the property that causes the difference observed when the</li> </ul>   |
|   | materials are stirred in water.  |
|   | • The response does not explain why filter paper can only use this property to separate oil and water,   |
|   | not soap and water.  |

## Item Set 2 – Question 14 (TEI Hot Spot)

Students learn that farmers often put fertilizer in the soil. Fertilizer helps the farmers grow the fruits and vegetables people use for food. The students wonder how wild plants grow without people adding fertilizer to the soil.

Select **one** organism in the food web that would help the wild plants the same way the fertilizer helps the farmer's crops.

| Crosscutting Concept    | CCC Not Assesse  | ed  |  |

After the tablet in the investigation in Part 2 has completely dissolved, a student unscrews the cap to the bottle. As the cap loosens, the students hear a hissing sound. What is the **most likely** explanation for the hissing sound?

- A. Small particles of gaseous matter exit the bottle.
- B. Small bubbles in the bottle turn back into water.
- C. The oil and water mix to form a single layer.
- D. The food coloring dissolves into the oil.

#### Item Set 3 – Question 4 (Multiple Select)

Students repeat the investigation in Part 2, but this time they weigh the tablet as well as the bottle and its contents before and after the investigation. The students do not put the cap on the bottle after the tablet is added.

Which statement predicts what the students will observe in the investigation, and which description correctly explains their observation? Select two correct answer choices.

- A. The mass of the bottle after the investigation was greater than the mass of the bottle and tablet before the investigation.
- B. The mass of the bottle after the investigation was the same as the mass of the bottle and tablet before the investigation.
- C. The mass of the bottle after the investigation was less than the mass of the bottle and tablet before the investigation.
- D. This is evidence that no new substance was formed as the matter in the tablet was destroyed.
- E. This is evidence that a new substance was formed and left the bottle as a gas.

| Item Information        |                                |  |  |
|-------------------------|--------------------------------|--|--|
| Answer                  | С, Е                           |  |  |
| Standard                | Physical Science               | 2  |  |
| Evidence Outcome        | SC.5.1.2.b                     | Conduct an investigation to determine whether the mixing of two or<br>more substances results in new substances. (5-PS1-4) SEP 3<br>PCOI CCC 2 CAE                   |  |
| Disciplinary Core Idea  | SC.5.1.2                       | Chemical Reactions that occur when substances are mixed can be identified by the emergence of substances with different properties; the total mass remains the same. |  |
| Science and Engineering | Planning and                   | Make predictions about what would happen if a variable changes.  |  |

| Crosscutting Concept    | Cause and Effect               |  |  |

A bottle of water and a bottle of clear oil are on a table. The students notice that the liquid in the bottles looks the same.

Use the information in Part 1 to explain how a student can use food coloring to correctly identify the oil and the water. Your response should include a description of:

- how a student can use the way that food coloring behaves in water to identify a substance as water
- how a student can use the way that food coloring behaves in oil to identify a substance as oil

| Item Information                    |  |   |  |
|-------------------------------------|--|---|--|
| Answer                              | See Scoring Rub                                | See Scoring Rubric and Sample Student Responses   |  |
| Standard                            | Physical Science                               | 2   |  |
| Evidence Outcome                    | SC.5.1.1.b                                     | Make observations and measurements to identify materials based<br>on their properties. (5-PS1-3) (Clarification Statement: Examples of<br>materials to be identified could include baking soda and other<br>powders, metals, minerals and liquids. Examples of properties could<br>include color, hardness, reflectivity, electrical conductivity, thermal<br>conductivity, response to magnetic forces and solubility; density is<br>not intended as an identifiable property. Does not include density or<br>distinguishing mass and weight.) (Boundary Statement: At this grade<br>level, mass and weight are not distinguished, and no attempt is<br>made to define the unseen particles or explain the atomic-scale<br>mechanism of evaporation and condensation.) |  |
| Disciplinary Core Idea              | SC.5.1.1                                       | Matter exists as particles that are too small to be seen;<br>measurements of a variety of observable properties can be used to<br>identify particular materials.  |  |
| Science and Engineering<br>Practice | Planning and<br>Carrying Out<br>Investigations | Test two different models of the same proposed object, tool, or process to determine which better meets criteria for success.   |  |

| Scoring Rubric |  |  |  |  |  |  |
|----------------|--|--|--|--|--|--|
| Points         | Attributes   |  |  |  |  |  |
|                | The response should include a description of:  |  |  |  |  |  |
|                | <ul> <li>How a student can use the way that food coloring behaves in water to identify a substance as<br/>water.</li> </ul>                          |  |  |  |  |  |
| •              | • How a student can use the way that food coloring behaves in oil to identify a substance as oil.  |  |  |  |  |  |
| 2              | 2 Student responses may include but are not limited to:  |  |  |  |  |  |
|                | It dissolves in water. It does not dissolve in oil.  |  |  |  |  |  |
|                | Note: Swirling may be mentioned for mixing food coloring with the liquids. Students may describe the dissolving rather than naming it as dissolving. |  |  |  |  |  |
| 1              | Student response demonstrates a partial understanding of the task.   |  |  |  |  |  |
| 0              | Student response does not demonstrate an understanding of the task.  |  |  |  |  |  |

Г

|            | Sample Student Responses   |
|------------|--|
| Sample stu | dent responses are not representative of all correct answers for an item and are provided only as a guide to assist teachers with scoring. |
| Points     |  |
|            | Sample Response  |
| _          | It dissolves in water. It does not dissolve in oil.  |
| 2          | Sample Annotation  |
|            | This response demonstrates a complete understanding of the task. The student describes the behavior of                                     |
|            | the food coloring both in the water (It dissolves) and in the oil (It does not dissolve).  |
|            | Sample Response  |
|            | The students can put food coloring in the bottles. The food color doesn't dissolve in the oil, it just lays at the                         |
|            | bottom of the bottle until you swirl it around, then it just makes a bunch of little bubble in the oil, like a                             |
|            | snow globe.  |
| 1          | Sample Annotation  |
|            | This response demonstrates a partial understanding of the task because it is incomplete. Only the behavior                                 |
|            | of food coloring in vegetable oil is described (The food color doesn't dissolve in the oil, it just lays at the                            |
|            | bottom until you swirl it makes a bunch of little bubble). The behavior of food coloring in vegetable water                                |
|            | is not described.  |
|            | Sample Response  |
|            | They could pour some on their hand. If it's wet, it's water. If it feels slimy, it's oil.  |
|            | Sample Annotation  |
| 0          | This response does not demonstrate an understanding of the task because it does not address the behavior                                   |
|            | of food coloring with either liquid. Although a tactile approach may work to differentiate water from                                      |
|            | vegetable oil, the prompt specifically asks how a student can use food coloring to correctly identify the oil                              |
|            | and the water.   |

In the simulation, Jupiter, Mercury, and Venus are shown. Venus appears brighter than Mercury in the night sky. Using your knowledge of the factors that affect the brightness of objects, select one correct response from each drop-down menu to complete the sentences.

| Objects that are farther away vusually appear dimmer to  |
|--|
| a viewer than objects that are closer 🗸 . This   |
| information supports the claim that if Venus appears brighter than Mercury, then Venus is probably closer to |
| than Mercury is.   |

| Item Information                    |  |   |  |
|-------------------------------------|--|---|--|
| Answer                              | See Image                                | See Image   |  |

#### Item Set 3 – Question 8 (Selected Response)

The star M45 is visible during the total solar eclipse in the night sky in the Northern Hemisphere. If the same total solar eclipse would occur during the summer, M45 would not be visible. Why would M45 not be visible in the summer?

- A. because M45 changes the amount of light it gives off during different seasons
- B. because M45 moves closer to or farther from planets during different seasons
- C. because Earth revolves around the Sun
- O D. because Earth rotates on its axis

| 1              | Student response demonstrates a partial understanding of the task.   |  |
| 0              | Student response does not demonstrate an understanding of the task.  |  |

|             | Sample Student Responses   |
|-------------|--|
| Sample stud | dent responses are not representative of all correct answers for an item and are provided only as a guide to assist teachers with scoring.   |
| Points      |  |
|             | Sample Response<br>During the partial solar eclipse, only the Sun is visible in the sky, while stars such as Hamal and M45 and<br>planets such as Mercury, Venus, and Jupiter are visible during the total solar eclipse. The brightness of the<br>Sun outshines the other stars during the partial solar eclipse because it is the closest star to Earth.   |
|             | Sample Annotation  |
| 2           | The student demonstrates a complete understanding of the task. The comparison of bright objects seen during the partial eclipse to those seen during the total eclipse is correct ( <i>During the partial solar eclipse, only the Sun is visible in the sky, while stars such as Hamal and M45 and planets such as Mercury, Venus, and Jupiter are visible during the total solar eclipse</i> ). The explanation of why the differences in brightness correctly support the student's claim ( <i>The brightness of the Sun outshines the other stars during the partial solar eclipse because it is the closest star to Earth</i> ).   |
|             | Sample Response  |
|             | During a partial eclipse, you can only see the bright sun in the sky. But during a total eclipse, you can see<br>lots of stars like Hamal and M45 and some planets like Venus and Jupiter, because it's so dark, just like at<br>night.  |
|             | Sample Annotation  |
| 1           | The response demonstrates a partial understanding of the task. The comparison of bright objects seen during the partial eclipse to those seen during the total eclipse is correct ( <i>During a partial eclipse, you can only see the bright sun in the sky. But during a total eclipse, you can see lots of stars like Hamal and M45 and some planets like Venus and Jupiter</i> ). The explanation of why the differences in brightness correctly support the student's claim ( <i>because it's so dark, just like at night</i> ) does not mention the sun outshining the stars during the partial eclipse to support the student's claim that the sun is the star closest to earth. |
|             | Sample Response  |
|             | During a total solar eclipse, the sky gets very dark, just like at night. It is so dark that you can even see stars<br>in the sky, in the middle of the day.   |
| $\cap$      | Sample Annotation  |
|             | This response does not demonstrate an understanding of the task. There is no comparison of bright objects seen during the partial eclipse to those seen during the total eclipse, only a mention that stars are visible during the total solar eclipse. There is no explanation of the differences in brightness to support the student's claim.   |

Use the simulation to observe and compare how each star looks during the total solar eclipse. Your response should include:

- how the appearances of the stars compare to each other
- how comparing the stars provides evidence for the distances of stars from Earth

| Item Information        |   |   |  |

|                          | Sample Response<br>Some stars appear larger and brighter than other stars. Compared to the size of the Sun, the sizes of the<br>other stars appear very small and their apparent brightness is much less. This provides evidence that the<br>other stars are different distances from Earth, though they are all much farther away than the Sun.   |  |  |  |
| 2                        | Sample Annotation  |  |  |  |
| 2                        | The student demonstrates a complete understanding of the task. The comparison of the appearance of the stars is correct (Some stars appear larger and brighter than other stars. Compared to the Sun, the sizes of the other stars appear very small and their apparent brightness is much less). The explanation of how this comparison gives evidence of the stars' distances from earth is also correct (the other stars are different distances from Earth, though they are all much farther away than the Sun). |  |  |  |
|                          | Sample Response  |  |  |  |
|                          | During the total solar eclipse, you can see the stars in the sky. Some look brighter and some look dimmer than the others. And some look bigger and some smaller. But none look as big or as bright as the sun.  |  |  |  |
|                          | Sample Annotation  |  |  |  |
| 1                        | The response demonstrates a partial understanding of the task. The comparison of the appearance of the stars is correct ( <i>Some look brighter and some look dimmer than the others. And some look bigger and some smaller … none look as big or as bright as the sun</i> ). The response is incomplete because there is no explanation of how the comparison gives evidence of the stars' distances from earth because distance from the earth is not mentioned.   |  |  |  |
|                          | Sample Response  |  |  |  |
|                          | The stars and the planets are just little dots of light so that means they are all about the same distance away.   |  |  |  |
| 0                        | Sample Annotation  |  |  |  |
|                          | This response does not demonstrate an understanding of the task. The attempted comparison of the stars is not acceptable because it does not address relative apparent brightness or size. The supposition that the planets and stars are all about the same distance from earth is incorrect.   |  |  |  |

#### *Item Set 3 – Question 11 (Constructed Response)*

A student wonders whether the stars he saw during the total solar eclipse in the simulation would be the same stars he could see twelve hours later. Explain how the sky and the stars that are seen would change over twelve hours. Your response should include:

- a description of how the sky and the stars the student could see would look different
- why the sky would look different

| Item Information        |   |  |  |
|-------------------------|---|--|--|
| Answer                  | See Scoring Rubric and Sample Student Responses |  |  |
| Standard                | Earth and Space Science                         |  |  |
| Evidence Outcome        | SC.5.3.2.a                                      | Represent data in graphical displays to reveal patterns of daily<br>changes in length and direction of shadows, day and night, and the<br>seasonal appearance of some stars in the night sky. (5-ESS1-2)<br>(Clarification Statement: Examples of patterns could include the<br>position and motion of Earth with respect to the sun and selected<br>stars that are visible only in particular months.) (Boundary<br>Statement: Does not include causes of seasons.) |  |
| Disciplinary Core Idea  | SC.5.3.2  | Earth's orbit and rotation and the orbit of the moon around Earth cause observable patterns.   |  |
| Science and Engineering | SEP Not   | N/A  |  |
| Practice                | Assessed  |  |  |
| Crosscutting Concept    | Patterns  |  |  |

| Scoring Rubric |   |  |  |
|----------------|---|--|--|
| Points         | Attributes  |  |  |
| 2              | <ul> <li>The student response should include:         <ul> <li>A description of how the sky and the stars the student could see would look different.</li> <li>Why the sky would look different.</li> </ul> </li> <li>Student responses may include but are not limited to:         <ul> <li>The current stars would move across the sky, and different stars will appear twelve hours later. This is because Farth rotates on its axis, so the point of view on Farth would be facing a different part of the sky.</li> </ul> </li></ul> |  |  |
| 1              | Student response demonstrates a partial understanding of the task.  |  |  |
| 0              | Student response does not demonstrate an understanding of the task.   |  |  |

| Sample Student Responses |   |  |  |
|--------------------------|---|--|--|
| Sample stud              | ent responses are not representative of all correct answers for an item and are provided only as a guide to assist teachers with scoring.   |  |  |
| Points                   |   |  |  |
| 2                        | Sample Response   |  |  |
|                          | The current stars would move across the sky, and different stars will appear twelve hours later. This is  |  |  |
|                          | because Earth rotates on its axis, so the point of view on Earth would be facing a different part of the sky.   |  |  |
|                          | Sample Annotation   |  |  |
|                          | This response demonstrates a complete understanding of the task. The description of how the sky and stars would look different is correct ( <i>The current stars would move across the sky, and different stars will</i>  |  |  |
|                          | appear), and the explanation as to why the sky would look different is correct (Earth rotates on its axis, so   |  |  |
|                          | the point of view on Earth would be facing a different part of the sky).  |  |  |
|                          | Sample Response   |  |  |
|                          | They would see different stars in 12 hours because the stars move across the sky, like the sun.   |  |  |
| 1                        | Sample Annotation   |  |  |
| L 1                      | This response demonstrates a partial understanding of the task. The description of how the sky and stars  |  |  |
|                          | would look different is correct (because the stars move across the sky, like the sun); however, there is no   |  |  |
|                          | mention of the Earth rotating on its axis as the explanation why the sky would look different.  |  |  |
|                          | Sample Response   |  |  |
|                          | It's going to be the same stars because they have been there for millions of years and will be for millions   |  |  |
|                          | more.   |  |  |
| $\cap$                   | Sample Annotation   |  |  |
| U                        | This response does not demonstrate an understanding of the task. The response is incorrect, as the stars visible behind the sun during the solar eclipse are not visible to that side of Earth at night. The Earth's rotation, which would expose a different part of the sky to a place on Earth over 12 hours, is not |  |  |
|                          | mentioned.  |  |  |

| Bas | Based on the information in Table 1, which claim is supported? |   |  |
|-----|--|---|--|
| ۲   | A.   | Medium-sized dogs use more energy from the Sun than small-sized dogs use. |  |
| 0   | В.   | Medium-sized dogs use more energy from water than giant-sized dogs use.   |  |
| 0   | C.   | Large-sized dogs use more energy from the Sun than giant-sized dogs use.  |  |
| 0   | D.   | Large-sized dogs use more energy from water than small-sized dogs use.    |  |
